PRELIMINARY SCIENTIFIC PROGRAMME

MESSAGE FROM THE
SICOT PRESIDENT

ASHOK JOHARI

For sure the world has been changing at a pace faster than the accumulation of new knowledge and discoveries! The upheaval caused by the corona virus has given rise to unprecedented challenges for organisations like SICOT and popularised newer methods for transmission of scientific communications. The hopes of having an exciting face-to-face Congress in Budapest last year were smashed and the meeting postponed to this year. However, COVID-19, an uninvited guest, continues to be with us even now.

Whilst all of us are enthusiastic about meeting face-to-face, this year we will be meeting in a hybrid fashion – face-to-face for those who can and virtually for the others. This, however, will not diminish the importance of the 41st SICOT Orthopaedic World Congress as a premier event for the exchange and interchange of knowledge.

SICOT, as the leading global organisation in orthopaedics, is well known for bringing together on one platform both developed and developing nations, thereby helping global elevation of standards of orthopaedic care, education and research. With this singular aim, numerous educational formats have been designed. Under the prevailing conditions, the call for abstracts has yielded over 2000 abstracts; the very best have been selected for presentation at the meeting. A virtual course on polytrauma management and an in-person course on disaster management, a virtual Educational Day, numerous symposia covering all subspecialties in orthopaedics, panel and case discussions, research presentations and award papers will all entice you in their own way! The three plenary lectures will look at three areas of knowledge with the usual cutting-edge insight and critical view. All of our partner organisations will be there to present their specialist programmes which you cannot miss! Four rooms will be run on-site in Budapest, whilst ten more will operate online to our global audience. The Programme Committee has been working in overdrive to keep you engaged and occupied in contemplation and reflection on the state of orthopaedics in 2021!

So, it is my pleasure to welcome you to the 41st Orthopaedic World Congress of SICOT, personally and formally, for an experience different from the norm, and which, because of the contrasts, will stick in your memory for years to come!! Please come – physically or virtually to meet old friends and colleagues and to share from that endless cup of knowledge!!

It is a great honour for me, as President of the 41st SICOT Orthopaedic World Congress in Budapest to welcome all of you who are thinking of taking this academic tour to Central Europe again following a really successful event in Prague in 2011. My special welcome goes to the SICOT Friendship Nations! We decided this year to offer this status to Austria, Croatia, Czech Republic, Hungary, Slovakia, and Slovenia (CEOC). Participants who are coming to Budapest, our capital, for the first time, are going to experience a friendly atmosphere in a city with plenty of historical heritage. Budapest was voted the second most beautiful city in the world in 2017 and 2018 and received the European Best Destination prize in 2019. You will have the opportunity to see the Blue Danube separating Buda from Pest and climb the Gellért hill from which all the bridges and main buildings are visible. What an unforgettable experience! There are so many good reasons to attend this important event beyond the scientific part of the conference. For those for whom travel in 2021 will be impossible, we have a quite excellent virtual programme up our sleeve!

Concerning the scientific part of this Congress, the instructional programme has been organised by myself and the Programme Team. In 2021 the Educational Day is going to centre on the 'Shoulder & Elbow'. Invitations have been sent to the Plenary Speakers and Keynote Lecturers in different subjects. Besides the key opinion leaders, free paper sessions, workshops and 'Just-A-Minute' presentations will be put together. Young orthopaedic surgeons are warmly welcomed as always.

From the moment we first knew that the Congress would be held in Hungary, we began preparing something special. We have been translating a magnificent book on the History of Hungarian Orthopaedics from 1836 to 2008, and we have now added our orthopaedic history up to 2020. When you read this new version of the book you will be able to explore the past and present of Hungarian orthopaedics and learn about nearly 200 years of Hungarian excellence in the field.

As President of the Congress, together with the members of the Programme and Organising Committees, I guarantee that you will not regret attending this multi-faceted event, be that in-person or online! See you in September 2021!

MESSAGE FROM THE SCIENTIFIC PROGRAMME CHAIR
GOWREESON THEVENDRAN

It is with great pleasure that I present the Preliminary Programme for the 41st SICOT Orthopaedic World Congress which will take place both in Budapest, Hungary and online on our bespoke event platform from 15-18 September 2021!

Designing and executing a scientific programme is akin to writing a movie script. Different plots, casts and exciting moments all with a memorable storyline. This year, there is the added sub-plot of the COVID-19 pandemic, and how to write a programme that takes this and the new challenges we all face into account. The SICOT story has always been one that celebrates diversity and democracy of ideas through its strong research and education academies. Unlike any other traditional organisation beyond her 90th anniversary, SICOT has evolved remarkably from a society of orthopaedic generalists to presenting a scientific programme that is current, strong in scientific muscle and yet caters for the wide and truly global audience that SICOT embraces. This year, for the first time, we also will take advantage of emerging virtual technologies as well so that we can continue to reach as many people as possible despite travel limitations. This will be the first 'hybrid' Orthopaedic World Congress, with both face-to-face and virtual elements.

I am excited to confirm our Plenary Speakers; Dr Kevin Tetsworth (Australia), Professor Laszlo Hangody (Hungary) and Dr Onder Aydingoz (Turkey). All three are incredibly experienced and respected leaders in their own fields; I think we can look forward to some truly stimulating lectures from them. The Instructional Programme will include the usual diversity of key opinion leaders, local and international speakers, and we will be continuing our relationship with many of the Partner Societies who have put on such fantastic sessions in the past. The Specialty Chairs have been particularly creative in their presentations this year, and alongside the traditional lectures you will find debates, round tables, videos, live polls and case discussions. The theme for the 2021 Educational Day will be 'Shoulder & Elbow'.

Finally, I must add, this feat is no accomplishment of just one individual. Michael Jordan famously said, 'Talent wins games but intelligence and teamwork win championships'. Tireless support from my co-chair Peter Yau, the SICOT HQ, the guiding hand of the Education Academy Chair, the indefatigable Programme Coordinator Becca White and yourselves, our immensely supportive membership, are and will be the reasons why Budapest 2021 will be an unforgettable story. I hope you are all as excited as I am to visit Budapest (even if virtually!); it is going to be wonderful and inspiring to come together, share ideas, educate, be educated and of course (we hope), catch up over a glass of Torley! See you in September!

A 'hybrid' Congress: the new format for a new normal

SICOT is proud to be hosting its first ever 'hybrid' Orthopaedic World Congress in 2021, and hope that it will give more surgeons than ever the chance to take part in the meeting - whatever their location, means or work commitments.

The hybrid Congress will feature three main types of sessions:

- **VIRTUAL** - these sessions will be held live online on our bespoke meeting platform - you can expect all the usual features of a SICOT symposium; lectures, debates, Q&A and audience participation. These sessions will also be available on-demand after the live showing.
- **HYBRID** - these sessions will be hosted in-person in the Budapest conference centre where possible, but they will also be live-streamed online on the meeting platform at the same time (the plenary speakers as well as other symposia fall into this category). These sessions will also be available on-demand after the live showing.
- **FACE-TO-FACE** - these sessions will be hosted in-person in the Budapest conference centre only.

PLENARY SPEAKERS

KEVIN TETSWORTH - AUSTRALIA

Prof Tetsworth is a highly accomplished and internationally recognised orthopaedic surgeon with expertise in multiple areas including deformity correction, limb lengthening, high-energy trauma, bone defects, post-traumatic limb salvage and reconstruction, osteomyelitis, prosthetic joint infection, complex revision arthroplasty and osseointegration for amputees. He completed his education and training in Chicago followed by two fellowships, one in Ilizarov surgery (under Dror Paley) and another in osteomyelitis (under George Cierny). Clinically active in orthopaedics for > 35 years, for the past six years he has partnered together with Prof Munjed Al Muderis using osseointegration for the reconstruction of amputees. Prof Tetsworth's research interests are as diverse as his clinical interests, including the biology of the Masquelet-induced membrane, intra-articular fractures, 3D modelling and printing, tissue engineering, biomimetic scaffolds, orthopaedic infections, bone defects, osseointegration and more. He has almost 200 publications, including one book, 16 book chapters and more than 135 PubMed listed peer-reviewed papers.

LASZLO HANGODY - HUNGARY

Prof Laszlo Hangody is an orthopaedic and trauma surgeon and member of the Hungarian Academy of Sciences. He is the head of the Department of Traumatology in Semmelweis University as well as the head of the Orthopaedic and Trauma Department of Uzsoki Hospital, Budapest. His main research focuses are total knee replacement, ligament surgery, cartilage repair and he was the developer of the mosaicplasty technique. He has served as an executive board member in several Hungarian and international scientific associations, and was a founding member of the International Cartilage Repair Society. He is an Honorary Member of the Arthroscopy Association of North America and his scientific contribution has been recognised by the Oscar Miller award as well as numerous Hungarian scientific recognitions. His department has been selected as a FIFA Medical Centre of Excellence and an ESSKA Teaching Center.

ONDER AYDINGOZ - TURKEY

Prof Dr Onder Aydingoz is the Chairman of the Department of Orthopaedics and Traumatology at Istanbul University - Cerrahpasa, Faculty of Medicine. He is a past president of European Federation of National Associations of Orthopaedics and Traumatology (EFORT) and Turkish Society of Orthopaedics and Traumatology (TOTBID). He was the Vice President of Asia Pacific Orthopaedic Association (APOA) from 2016 to 2018. He has also served on the boards of Turkish Spine Society (TOD), Turkish Education Council of Orthopaedics and Traumatology (TOTEK) and Turkish Orthopaedics and Traumatology Association (TOTDER). Currently he is the Federation Committee Chair of APOA, Chairman of the APOA Turkish Chapter, a board member of EFORT Foundation and a co-opted board member of Fragility Fracture Network (FFN).
